Finding a Strong VPN by Seomajestygrp

Article published on February 20th 2012 | Software

So youâ€™ve decided to use a VPN service, but you donâ€™t know how to find a strong VPN with the pow to play all of your favorite shows. If you comparison shop, some key questions will not only show the sales person that you know what you are talking about, and you know what type of service you are looking for, but you will, ultimately, be happier with the service you do end up using. Finding a strong VPN service is pretty important if you want strong uninterrupted service.

On the offhand chance that you do not yet know what VPN stands for, it is the abbreviation for Virtual Private Network. This is a network that allows you to watch shows through various outlets, like Netflix, Hulu, or BBC iPlayer, even if you donâ€™t reside inside of the US or the UK. For a small monthly fee, the VPN service will mask your true IP address and make it look as if you are located within the country where the service originates.

Find a strong VPN service that offers streaming VPN service. Why streaming VPN? Simple. Streaming VPN offers the best bang for your cyber buck in that it can handle the high resolution, high definition feeds that most of the television shows and movies are produced with. Also, a strong VPN wonâ€™t lock up or freeze, or rebuffer, in the middle of your show. See a strong VPN has a high transfer speed, for both uploads and downloads. Ask the potential VPN service about their transfer speeds. 'Editor's note: We use StreamingVPN to access online streaming content.'

Next, and this is incredibly important, ask about their security features. Most strong VPN have a 256-bit encryption so that your data is transferred securely and safely. What has become apparent by reading some of the technology forums is that a lot of people are opting for the free VPN services (not to be confused with the free trials) only to find out that the encryption and subsequent security features are lacking or non-existent, and therefore NOT a strong VPN.

Additionally, ask the potential strong VPN service just how many servers that have (both US and UK). See, if you find a VPN service that offers unlimited switching between servers, then youâ€™ve found a winning combination. But even with that criteria there is one extremely big point that youâ€™ve got to find out for yourselfâ€¦â€¦customer service.

Why would customer service matter? A strong VPN has fast, responsive and personalized customer support available to your 24/7 just in case something should happen. Find out about a VPNâ€™s service, and whether they would be a strong VPN by reading reviews about them. People talk about the bad service loudly on the internet.
