How can we make my computer run faster by Hennary Joe

Article published on January 11th 2012 | Software

PCs poor performance is a real problem for all the PC users. It affects our all activity that depends on a computer system. Hundreds of pour daily tasks are being done with the help of a computer system and if goes down and performing very poorly it may cost us a lot sometime. Important online transactions are some of the critical operations that really need a good PCs performance. I would like to share one of the incidents which I faced a PC few times back due to slow speed of a PC. I was paying a bill online and when I clicked on the payment button it was just crawling and I thought I didnâ€™t click on it. I refreshed and clicked again. It did not display any error or warning messages that I have clicked or refreshed the windows. Resulting in I paid the same amount 3 times. This is one of the examples of slow speed of the PC and slow Internet connection. Every PC user faces this sort of issue abound with in his life. On the contrary if your pc is working superb and you do not have any pc problem in it makes life easier.

There is a one important point which is-if we donâ€™t let our PC go bad this makes huge sense if you are a regular PC user. Using updated antivirus program, any registry cleaner program can help in this idea. There are lots of such programs that help in it. Although speeding up a PC does not mean just perform a small step and make it faster like a brand new but yes there are certain things that really can be applied and they certainly help us to reduce this issue and make our PC faster. Using a good registry cleaner program is one of them. However I would also like to mentioned few important points or steps that are of great use. Some of the points are below mentioned:-

Check your PC for any infections- Virus, spyware, malware, adware, Trojan programs , worm are such malicious and dangerous software programs that can harm your PC to any extent. They not only reduce overall performance of your PC but also affect your PC any ways. Sometime they can bring your PC on a stage where you donâ€™t have any option but to format it. It is assessed that in 80% of the slow PC issue infection is responsible. Now what can be the most effective solution for this? Officially we know an antivirus kills infections in your PC. Nevertheless there may be certain occasions where we need to go an extra mile to solve the issue. That is a manual intervention is must for some cases. . Nevertheless there may be certain occasions where we need to go an extra mile to solve the issue. That is a manual intervention is must for some cases. . Nevertheless there may be certain occasions where we need to go an extra mile to solve the issue. That is a manual intervention is must for some cases.
