How to Easily Get Your Windows 7 Password Back by [Linda Smallwood](#)

Article published on February 10th 2012 | [Software](#)

As is known to all, a strong Windows password is key to computer security. In view of it, some users set an extremely complicated Windows password consisting of various numbers, characters and symbols. It will greatly improve the system security without doubt. But if the user has bad memory, the complex Windows password can be easily forgotten. At that time, one has to seek for methods to perform Windows password recovery.

Have you tried some methods to remember your Windows password? Never write your password on a sticky note plastered to a desk or monitor. If you are easy to forget Windows password, you can make full of features in Windows: set a password hint to help you recover your Windows password, and create a password reset disk to reset Windows password if your password is forgotten or lost.

Windows password Hint

Some systems, like Windows 7, Vista and XP, allow you to create a password hint so that you can get some clues to remember your forgotten Windows password. It can be easily created a password hint when you set a Windows password to log on to computer. Please note if your computer is on domain, you cannot create a password hint. You can right-click My Computer to select Property, and then choose Computer Name to check if your computer is on domain.

The Windows password hint should be something that can help you remember a lost Windows password while it will not leak your Windows password. It appears below the password entry box, after you make an incorrect entry and then click OK. Never set the Windows password as your password hint as everyone is able to see your password hint.

Windows Password Reset Disk

If you don't like the password hint, you can create a Windows password reset disk. It will help you reset Windows password easily if your computer is locked.

Step 1: Click Start button, Control Panel, User Accounts and Family Safety and User Accounts.

Step 2: Click Create a password reset disk in the left pane.

Step 3: The Forgotten Password Wizard will open, insert a USB flash drive and then click Next.

Step 4: Select the portable media drive which you want to create a password reset disk on, and then click Next.

Step 5: Enter your current password, and then click Next

Step 6: Click Next when the progress indicator shows 100% complete, and then click Finish in the next window.

Once the Windows password reset disk is created, it can be repeatedly used to reset Windows 7 password without limitation. If it falls into hands of others, he or she will be able to enter your computer by performing Windows password recovery with the disk. So please store your password disk in a safe place.

Windows Password Tips:

With the development of technology, you can not only set a Windows password composed of letters, numbers and symbols, but also create a password with fingerprint. If you are a Window 7 user, you can enable fingerprint logon.

If you forgot Windows password and don't have a password disk, you can resort to Windows Password Recovery software like Windows Password Unlocker. It allows you to reset Windows password by burning a bootable CD/DVD or USB flash drive in 5 minutes.
