Have you ever wondered that what to do if you forget the administrator password of your computer? There is a need to hack the password of your own PC, if this happens to you. Now, you are probably wondering about how to hack your computer. Here's the solution to this problem. There are various methods to hack the password of your computer and two of them are mentioned below:

• Windows Password Recovery Corporation: It is an application that can be used on Windows Server2003/Server2008/ XP/7/Vista, domain, and local administrator. You need to follow a number of steps to hack your system:

1. Download the Windows Password Recovery software from the internet. After this, install it on another PC.
2. Take a blank CD or DVD and insert it into the CD or DVD Drive of the computer on which you have installed the password recovery software.
3. Now, press the "Burn" Button. This will burn the ISO image file to the DVD or CD drive.
4. After the file burns completely, eject the DVD or CD from the PC and insert this DVD or CD into the CD/DVD drive of the computer whose password you forget.
5. Boot the locked computer in BIOS mode with the help of that CD or DVD.
6. Now, the password can be easily recovered through CD or DVD.

• Password Reset Disk: It is another method to hack your computer's password. This method also enables you to remember your password. For this, you need to prepare a password reset disk. This process is faster in comparison to the Windows Password recovery corporation method. To solve your query, i.e. "how to hack your computer" and to set up a password reset disk, you need to follow the given mentioned criteria:

1. Go to "Start" button, then, access the control panel.
2. In the Control Panel, select the "user accounts" and click on the account whose password you want to reset.
3. Then, on the left side of the window pane, select the option "prevent a forgotten password".
4. After you click on that option, a pop up window named "forgotten password wizard" will open.
5. Before clicking the "next" button of the wizard, ensure that you have inserted the blank disk in the drive.
6. A progress bar will appear after you click "next", and in the end, press the "finish" button to complete the process.
7. After the process completes, eject the disk from the working computer and insert it into the locked computer to unlock it by resetting the password again. This is the process that gives you a solution of your "how to hack" problem.

Use the above methods, if you face the same problem with your computer. You will be astonished to know that hacking passwords is not a limited field. These days, there are softwareâ€™s with which you can steal the passwords of online accounts like Gmail, Yahoo, Facebook, Myspace, etc. and you can also buy these softwareâ€™s online.
