Article published on February 29th 2012 | Software

An update agent is the tool or the utility provided by the Windows to the computer users to stay update with the services and features of the latest versions of the Windows. It is an update tool which manages the process of the download and the installations of the windows update in the computer system. Windows update agent and the Microsoft update syncs together to install the all the latest updates successfully. This update tool works well and good with your local servers which has the feature of the Microsoft System Management Server. An update agent can easily get from the Microsoftâ€™s official site or by Goggling the internet from the Third party software providers.

Windows update agent keeps your system software up to date and secures the latest versions in your computer system. It also updates your Windows and the other important software of the Microsoft regularly, even ensures which updates are beneficial for your system or not. The updates installed by the Windows Update agent increases the reliability and increases the level of the performance against the unwanted threats like the virus attacks, malware and the Trojans. And also provide the security against the attacks from the hackers. Microsoft also provides the updates of the installed Drivers in your computer system which gives you the more reliability and gives you the best and the excellent performance

How to get automatically the latest version of the Windows update agent?

To install the latest version, visit the website of the Windows. When you will visit the website, the latest version of the windows update will install automatically.

How to manually obtain the latest version of the Windows Update Agent?

First of all, determine which window (32 bit or 64 bit) you are using

After getting the information regarding the windows, do the following steps:

Click run and start the search of msinfo32.exe and then press the center. You will get the system information and now time for choosing the system type according the windows.

Now download the windows update agent according to the need or the requirements of the windows.

An improvement has been done in the latest version of the windows update agent 7.4:

Improved the scan time of the windows update.

Improved the user interface for the win vista and win xp.

Shows more detailed description of updates.

Provides many option and the choice for the user like when do you want to update? Or time to time scans.
