Article published on November 28th 2011 | Software

As a photography fan, you may take a lot of photos with your JVC video camera or camcorder. Most of JVC camcorders and video cameras save video clips with the MOD file extension. You may want to save and play MOD video on your personal computer. Unfortunately isn't compatible with many existing media players.

Before you return your new camcorder, you are recommended to use blu ray software to change this situation. It is not only a MOD player, but also an all-in-one media player that lets you easily play almost a full range of media files, like video, DVD, Blu-ray, AVCHD, photo slideshow.

Read the following steps on how to play MOD files so that you can enjoy all that footage you've recorded.

Step 1Download MOD Player

Download simply double-click the downloaded installation package of mod file player and follow the on-screen instruction to get the software installed and launch it after installation.

Step 2Load MOD file

In the main interface, you need to click the â€œMedia Managerâ€• or the â€œOpenâ€• button to add MOD your computer to this media player.

Step 3Customize the file

When playing MOD file, you can click â€œAV Centerâ€• to customize the file. This mod player provides a group of setting tools, such as audio output, audio effects, equalizer, display, and video effects.
More settings are available if you right click the playing panel and choose settings.

Step 4Control video playback

Feel free to switch â€œPlayâ€• and â€œPauseâ€• when you want to play or stop your video playing. To ge screen, you can double click the playing video. In addition, click the "Forward" button two or more times to fast forward your MOD video.
