Article published on April 16th 2012 | Software

With the release of the fifth-generation iPod in 2005, the age of digital video began in earnest. Along with CDs, computer users sought a method for ripping their DVDs into conveniently smaller files. While CD-ripping is an old trick by now, there are few DVD-ripping programs out there that can handle the task quickly efficiently. Fortunately, if you're a Mac user, you have access to the best program available for getting those DVDs to your hard drive, iPod, or Apple TV: Mac DVD ripper.

Simple introduction about Mac DVD Ripper

Mac DVD Ripper offers the best way to rip any DVD to AVI, MPEG, WMV, MP4, DivX, H.264/AVC, MOV, 3GP, etc. videos and MP3, WAV, WMA, AC3, M4A audios with High-Definition video support, which enable you watch DVD on your portable devices, such iPod, iPhone, PSP, and so on. Also, it assists you to capture movie scenes as static pictures.

Other key features of Mac DVD Ripper:

1.Enables to transfer output files to iPad/iPhone 4 directly after conversion.

2. Added video profiles supported by the newest iPhone 4.

How to rip DVD on mac?

In this article, you can learn about how to rip DVD on Mac by using a useful Mac DVD Ripper. Just follow the step-by-step guide below:

* 1.Download the useful Mac DVD Ripper and install it to your Mac.

* 2. Load the DVD files.

Insert a DVD and run the program, then click "Load DVD" or "Load IFO" button to import the DVD file. DVD Ripper supports DVD-9/5, IFO and DVD media files.

After you load DVD files, you can preview it, take Snapshots, and choose Subtitle & Audio Track.

* 3. Select the output file format.

Select the video/audio format you want from the "Format" drop down list. If you have no idea what formats your device supports, you can select it according to the name of your device. For example, you can select "iPod Touch MPEG-4 (*.mp4)" when you want to rip a DVD movie for your iPod Touch.

Tips: Tick "Merge into one File", you can merge multiple chapters into a single file to output.

* 4. Trim, Crop and Effects.

Trim: This function enables you to choose to rip any part of the DVD movie you need and helps you customize the size of video.

Crop: It allows you to cut the black margins of the movie. You can also customize the video frame

size: Keep Original, full screen, 16:9 or 4:3.

Effect: Hit the "Effect" button, you can customize the brightness, saturation, contrast and volume, etc. You can also apply different movie styles such as "Emboss", "Negative", "Old film" and "Gray".

* 5. Start to rip.

After all the above settings, you can start to rip the DVD files. It will take a while to rip the DVD depending on the speed of your Mac. When the process is finished, you can click "Open" to locate the file in your hard drive and then enjoy it on your iPad, iPhone, iPod, and any other mobile devices.
