How to turn movie format into DVDâ€™s by

Theodore Sumrall

Article published on February 15th 2012 | Software

In this new arena of new advancement, where every day we deal with new technical spot shows the strength of technical skill and technology of todayâ€™s world which somehow enhance us to move with it and gradually it somewhere help us to grow our point of level in this advanced world.

Some of the advanced things which are really very beneficial to the world about carry the content from one place to another or storing different content, data or some information there is a token of science i.e. (DVD) whose acronym is â€œDigital Versatile Diskâ€•

Benefits of DVD:

Due to its compact size naturally it can be carried to any place without any disturbance.

Due to its low cost it is very adorable in public because other storing devices like pen drives etc. which are quite expensive as compare to DVD.

DVD consist quite large space as compare to CD etc.

So itâ€™s quite obvious from above that if we have to carry some of our video or movie content to some place itâ€™s very simple for us to carry it through DVDâ€™s

There is various software through which we can convert movie format to DVD. In some pc there is inbuilt software for the same function but if we talk about the best of the best choice so u canâ€™t ignore window movie maker.

So letâ€™s talk how to start with it.

Download, install and run window movie maker which surely would take few minutes.

After window movie maker install in your system ,you will be serve with various options like add photos, pictures, music and snapshots so click on the add videos and pictures.

We can have as much content as we wish but we have to keep in mind about the space required by the DVD because if it exceeds we have to introduce another DVD.

There are many other tools through which you can make your content more impressive like trim tool which is located under the edit tab. It is use to truncate the data but it would take quite long time. So for better convenience this procedure is not necessary to explore.

Once we have got all your clips set up in the right order and all your effects popping, it's time to burn it to disc. Now we have to save this file. It first needs to save the project as a WMV file, which will take quite a while

When the whole procedure above mentioned goes all right , window DVD maker will be shown automatically then you have to click on the NEXT option and finally to the BURN option.
