Article published on May 11th 2012 | Software

The latest tidbit on apple iPhone comes in the form of a domain name -- iphone5.com -- for which Apple has filed a claim with the World Intellectual Property Organization. In its current state, iPhone5.com is a forum site, created in February 2008, according to the WhoIsrecord. Its copyright statement clearly indicates that it is "not endorsed, sponsored, nor otherwise affiliated with Apple" and that it was created "for the sole purpose of entertainment and knowledge."

And apparently at least some of the denizens of the site like it just fine that way. Worried that if Apple were to take control the site would be shut down, a commenter named Morphius wrote today: "we as members here before the 4s was even released at iphone5.com should stand our ground against Apple.

We have every right to be a fan of the iPhone and to talk and discuss about it. The next is a problem that deranged every new iPhone users.

How to view swf files on iPhone, iPhone 4S, even the new iPhone 5?

Now, we find more and more beautiful swf videos in website, they are so attractive. Sometime we will download excellent swf files. When you want to play these beautiful swf files in you iphone, you must have the above problem. Here Iâ€™m going to list 3 simple ways on how to view swf for iPhone users. We can maker use of the following 3 applications to view swf file.

Method 1: Skyfire Browser

With the Skyfire Browser, you can finally unlock the content that matters to you: funny video clips, sports and news updates, the video link your friend sent you. Its cloud computing platform translates videos from Adobe Flash into an iPhone-friendly format.

The â€œiconâ€• enables users to play millions of Flash videos around the web that otherwise do not play on mobile. This unlocks content trapped behind those error messages with question marks and blue Legos by transcoding the Flash content into HTML5 on Skyfireâ€™s servers.

After install the Skyfire browser, you can view the flash swf files directly.

Method 2. Jailbreak your iPhone

You need to jailbreak your iPhone.

Here is the procedure flow chart: install OpenSSH -> download, install and run Cyberduck for Mac or WinSCP for Windows -> download Frash-0.02.deb file -> navigate to /var/root/Media directory and create a folder named â€œCydiaâ€• -> create another folder named AutoInstall inside Cydia -> copy the Frash-0.02.deb file to folder AutoInstall -> restart.

Now you can enjoy swf files on your iPhone easily.

Method 3. swf Converter

As we know, mp4 video format is supported by iPhone, so if you want to view the swf video, only need to convert swf files to mp4 video. In Mac App Store, Doremisoft SWF Converter offer a

solution to convert online or local Flash SWF movies to MP4 files, and playback flash. swf movies on iPhone.

Only 4 steps to convert swf files to mp4 video.

Step 1: install and run swf converter

you can down this swf converter in mac app store, or visit the Doremisoft Web Site directly-Mac SWF Video Converter. And a pc user also will find the windows version in doremisoft.net.

Step 2: Click the add file button to import your SWF file to swf converter.

Step 3: Set output format as MP4 file.

Step 4: Click Start conversion to convert swf file to mp4 video.

When finished converting swf files to mp4, you can play mp4 file in your iPhone with video player.

All above 3 methods were listed for tell you how to view the swf file on iPhone and enjoy you iPhone better.
