Some guys complain that when they copy films on DVD disc into video files and watch them on laptop or PC, the quality get poor. As a matter of fact, convert DVD to video file format is a process of compress the 4-8 GB file in size into hundreds of Megabytes. The quality loss is inevitable. The compress process would ruin most of trivial data and video quality gets bad. Since this issue is unavoidable, we may still can decrease the damage minimum.

It is suggested to transform DVD to MKVï¼ˆhttp://www.mkvconvertersoft.com/how-to-convert-dvd-to-mkv-file/ï¼‰ format which is a more sensible choice to keep HD content than other containers like MP4, Avi format. - Convert DVD to MKV files, you may try Bluray to MKV converter which is also a DVD to MKV Converterï¼ˆhttp://www.mkvconvertersoft.com/bluray-to-mkv-converter/ï¼‰. This program can keep DVD content material away lossless together with multiple sound files, numerous subtitles.

This is a detailed tutorial about the steps to copy DVD to MKV:

1. Work the converter. There is a simple guide in program for your guide. Insert DVD disc into your computer drive. Click on add button to load DVD content in.

2. All data within the disc will be able to see in the program. Choose the longest title or choose your favorite chapter. Double click on the file to preview with build-in player. Please note that there is no sound while the video is playing.

Click on Edit to edit for output video files. Normally, there are multiple audio tracks and subtitles within DVD content. The tool enables you to preserve multiple subtitles and soundtracks. Go to "Tools"-> "Preferences"-> "Audio" "Subtitle" tab to set.

Choose one "Format" in its menu, if you prefer to copy DVD to MKV without any quality reduction, please select "Lossless".

3. Click on "OK" to move on. Get back to main interface, set a folder on your computer as output folder, then click on MKV switch to start transforming DVD to MKV. .
