Htmlangels.com processes PSD to XHTML by Mike Nielson

Article published on January 25th 2012 | Software

The process of PSD to XHTML/CSS is similar to the finishing of a building. As discussed in previous articles which established that web site design and creation is comparable to that of the construction of a building; the analogy being the PSD is likened to that of working drawings, the HTML to that of the structural works and the CSS to that of the finishing touches.

HTML is the building block while CSS provides the beauty and the usage of the web site. In like manner, structural works provide the strength and the stability of the structure and finishing works the beauty and visibility of the edifice. However in web site creation there is also the PSD to XHTML/CSS.

XHTML/CSS is a more advance process in web designing which is used to increase web applications. They can be identical to a building service system. It is a category of system which provides electric power, heating and air conditioning, water and drainage disposal and even fire protection and safety. Where the CSS is likened to finishing works that dictate the visibility and beauty of the building, the XHTML is analogous to the livability and comfort of a particular structure. The more resources and the more advance the equipment and material that are used in the installation of the building service systems, the more comfort, safety and efficiency can be provided by the building to its inhabitants. In much the same way that the PSD to XHTML/CSS conversion process can enable the web site to provide more applications and support format that will make it more user and more search engine friendly.

As previously pointed out, PSD to XHTML/CSS is an advance program and is considered one of the latest innovations in todayâ€™s web design. As such, not all web design companies are in possession of this program and if a certain client requires a more complex web site, he first better inquire on the availability of the PSD to XHTML/CSS capabilities of the company.

Htmlangels.com operates a PSD to XHTML conversion process. This company is capable of tackling whatever complexity a web page requires. To complement the wide array of the latest PSD conversion programs, htmlangels.com is staffed with highly competent technical personnel and people oriented managers who guarantee to deliver what has been committed. To htmlangels.com, customer satisfaction is paramount. They provide you with what you need and they give you what you demand.
