Instructions for Installing Windows 7 from Inside XP by Harish Sheel

Article published on March 5th 2012 | Software

Window 7 is the latest Microsoft operating system. Window 7 is the Microsoft's best operating system till now in Windows line. Window 7 offers you a large number of new and improved features, these features have made easy to works while operating in Window 7. Window 7 has three different versions, which includes Window 7 ultimate, Window 7 home premium and the Window 7 Pro. The window 7 offers you the option to upgrade your current operating system or whole new custom installation. Upgrading your current operating system can save your lot money than the whole new installation. Before installation or upgrading your current operating system, make sure to create the back up of your personal files.

Instructions to install Window 7 from inside the XP

Step 1

Purchase the Window 7 operating system installation disc or download the files from the internet.

Step 2

Insert your Window 7 installation disc in optical disk drive, the setup will start automatically. If the setup does not start automatically, go to the start menu, see through it and click on my computer. A new window will appears, right click on the optical disk drive, click on open it, browse through the files and double click on Window 7 setup file and installation process will begin.

Step 3

Now installation Window will appears, click on â€œInstall nowâ€• to proceed to next step.

Step 4

Properly read the â€œuser license and agreementâ€•. Make check on the check box, located next to the â agree the terms and conditionsâ€• for confirmation.

Step 5

Click on next button, it will let you to a new screen with the option â€œWhich type of installation do you want.â€•

Step 6

From the type of installation option, you have to select â€œupgradeâ€•

Step 7

If you have internet connection download the important updates, if not skip the updates screen.

Step 8

Keep following the instructions, until the installation process is over.

Step 9

Never interrupt the installation process, let Window 7 to get install completely. When the installation is over, the computer will automatically reboot.

Tips

Although while upgrading you operating system to Window 7, all your personal files will get transfer from your current operating system to Window 7 automatically but creating the backup of your personal data is important. Before installation or upgrading make sure, all your hardware and configuration supports the new operating system, there is no application or driver compatible issues even in a compatibility mode. See which version of Window 7 suits your computer more (according to its configuration) to get the best performance. Lastly I would like to say, always ask yourself why you want to use or upgrade to new operating system.
