Make your own mobile website quickly and efficiently by [Kireenpolard](#)

Article published on December 27th 2011 | [Software](#)

Today the whole world is progressing towards the internet as everyone wants to stay connected to the web. With the advent of mobile phones being able to connect to internet, the mobile web browsing is turning to become one of the best predominant internet platforms. As a result many companies are looking to launch the mobile version of their website. A mobile website is not merely a passing fad; it's a best marketing tool to win over in this competitive market. This article helps you to learn how to make mobile website that looks smarter even on low end mobile phones.

Millions of people browse the internet through their mobile phones. Basically the website designed for computer browsers are not compatible with the mobile phones. This is the fact, which leads to the construction of mobile version of the websites. The construction of mobile site is quite different from that of the normal web site designing. The technical knowledge is not necessary for developing a mobile website of your own. There are many user-friendly websites which helps you to gather information about how to make mobile website easily.

In mobiles phones the WAP technology is used for browsing. By modifying your existing website to make it ideal for mobile phones is one of the easiest methods to develop a mobile site within minutes. Another way is to build a new mobile version independent of your existing website. While learning how to make a mobile website the primary things to consider are the reduced bandwidth and screen size issues of mobile phones. This mobile friendly alternative version of a website promises the users with right browsing experience through their handsets.

There are many other options and basic techniques that are necessary to consider while learning how to make mobile website. You should focus on the layout of the webpage, contents, coding, images, ease of navigation and page size as well as page links. You can check the mobile version of your site on various platforms to make sure that it provides an excellent browsing experience for various clients. The mobile site should be updated eventually to catch up with the growing demands of mobile web surfers. The mobile website should also be convenient to cope up with the variable screen size and resolution of different mobile phones.
