Microsoft Office 2010 Installation Problems and Way Out

by Jack K Wilson

Article published on June 5th 2012 | Software

Microsoft Office 2010 takes your experience with the Office productivity suite to a new level pushing all boundaries. Itâ€™s no more restricted to a desktop or workstation, where you used to create boring documents or spreadsheets. Work globally and even manage digital communication over the web in an effective way. Advanced picture formatting tools and a wide range of customizable themes and SmartArt graphic layouts offer more ways to give intuitive shape to your ideas. It transforms the concept of working in group.

The integrated Word 2010, PowerPoint 2010, Excel Web App, and OneNote 2010 are soaked with desired features so that you can work with groups, irrespective of their location or geography, where each member will have the distinct rights or permission to create, read or edit that content effectively. Read this Microsoft Help article to know factors that make it stand out of the crowd.

Features rationalizing the concept of collective working includes: (a) Microsoft Office Web Apps- transforms all Office programs to the cloud to make that accessible over a browser. This not only facilitates team members to improve performance but also offers protection from data theft or data loss due to viruses, malware and other Internet threats. (b) Microsoft Office Mobile- syncs all Office applications with your Windows Phone 7 device so that you can access and respond from anywhere. (c) Microsoft SharePoint Workspace 2010- Synchronizes SharePoint 2010 lists and libraries with SharePoint Workspace to let businesses and enterprises to leverage their employees to access, view, and edit files anytime and anywhere from their computer along with updated version.

As usual software vulnerabilities are also associated with Microsoft Office 2010. Issues not only make their way in the path of product installation, activation, update or upgrade but hinder the performance of the installed program as well. Most of the installation issues are related to operating system compatibility, and corresponding error messages indicate clearly as what to be done next. To be on safer side, you should read the system requirement first. If you donâ€™t have the compatible OS then itâ€™s recommended to get the one. Also, try to run the Office 2010 Setup in non -compatibility mode (you can do it through the properties window of setup file).

At times, Microsoft Fix It tool may pop-out with two options: "Fix it for me" and "Let me fix it myself". The tool will diagnose the system, and will fix the corresponding error or will give instructions, when itâ€™s beyond coverage. Alternatively, search through the knowledgebase and Microsoft Answer community to find a fix for any prevailing installation issue.

Donâ€™t worry even if you are lacking the technical expertise. Get in touch with Microsoft Support portal over phone, chat or email, and allow experts to analyze your system remotely. They can observe the changes in the Windows Event Viewer, Task Manager and Registry Settings to dig the cause, and can troubleshoot the system accordingly. Experts can reinstall the Office program, remove older programs and activate it effectively with entire components. Technicians can also scan, detect and remove viruses and spyware from your machine, if required, either through standard removal tool or by the manual diagnostic of the hidden system files and registry hive.
