MTS Converter for Mac Arrived from IOrgSoft in 2012 by Nadia

Article published on February 15th 2012 | Software

iOrgsoft, a professional multimedia provider, today is glad to announce its brand new 2012 New Year gift named MTS Converter for Mac for all Sony, Canon, Panasonic camcorder users for you to import, play and edit your MTS files on your Mac.

As it to known all that, popular camcorders like Sony, Canon, Panasonic record videos in high definition AVCHD, MTS, M2TS, TS, TP, TRP files, which are not recognized by Mac, not to mention to play and edit on Mac.

Take myself as an example, recently, I got a new Sony camcorder, the model is Sony Cyber-shot TX55, a really smart, easy to carry camcorder that record MTS video in good quality. I shoot a short video with the camcorder, but when I import to my Mac Lion, nothing happens. Then, suddenly, MTS Converter for Mac hit my mind, with it, I easily converted my videos to MOV files for playback and editing in QuickTime and iMovie. Wonderful.

While, problems with MTS file are common. Just list some of the examples that I found in Yahoo Answers.

â€œWell, my friend and I are working on a project for video class. She says she plugs the camera into the mac, opens up iMovie '08, and then iMovie "unexpectedly quits." I had a look at the camera, and there are these .MTS files that do not open up. Can someone help us import our footage? What can we do to keep iMovie from quitting?â€•

â€œI'm wondering about getting final cut express because i want to edit my hd footage. However the format i record in .mts and i don't know if i can just import them or convert it. Do i need a external software, plug in or does final cut dot it. and maybe it can't if so is there any software for Mac that can.â€•

Donâ€™t worry, MTS Converter for Mac can offer you a solution. With it, you can easily convert your AVCHD, MTS, M2TS, TS, TP, TRP files that taken from your Sony, Canon or Panasonic camcorders to almost any popular file formats like AVI, Divx, Xvid, WMV, MPG, MOV, MP4, M4V, DV, FLV, 3GP, RM, ASF etc you want with fast conversion speed and best output quality.

Besides converting AVCHD, MTS, M2TS files to common video and audio files for playback in iTunes, QuickTime, edit in iMovie, FCP, enjoy on portable devices iPad 2, iPhone 4S, watch on tablets Kindle Fire, Samsung Galaxy Tab 10.1. Mac MTS Converter can also help you customize your video with the built-in video editing functions like video clip, video crop, video effect etc. Just feel free to explore more.
