Open Source ERP Customization: Some Reasons to Consider and Reflect On

by Jerome Smith

Article published on December 29th 2011 | Software

If you have a company and want to manage its daily documentations in a systematic and organized way, open source ERP can be the solution for you to depend on. It is widely observed that the modern industry is largely depending on Open source ERP Customization to ensure a better and handy solution worth trying out. But before you decide about using this new age software for your own business, letâ€™s take a look through what is meant by open source ERP customization.

Open Source ERP Customization

To make the operation of a company more organized, analyzed and streamlined in its commercial activities, ERP or Enterprise Resource Planning is the software that can help support your works amiably. If you have a small or medium size company, open source ERP customization can be the ultimate step to enjoy a better functional processing that is user friendly with its simple techniques.

Advantages of Open Source ERP Customization

To help you, here in this article we bring for you some of the prominent reasons of using open source ERP customization software.

â€¢ Flexibility at Its Best: The best advantage of using open source ERP is that you can enjoy complete flexibility and customization facility in accordance to the size of your business. Unlike other software that do not allow you to access it after a certain point of module, open source ERP is customized to provide you with a scalable platform that is easy to manage.

â€¢ Price of the Software: Another effective benefit of using the open source ERP software is that it comes absolutely free of cost. From the softwareâ€™s license to module, you will get to enjoy all without even having to feel the pinch on the pocket. Moreover, you can add as many users you want without any thought for hidden or extra costing.

â€¢ Free bug support: While many software charges quite a high amount to provide customers with proper technical supports, open source ERP customization solution enjoys complete free working. Being open source software that works on an open source code that is used by lots of users at once, ERP do not face any major bug issue as it gets solved by either one of the users in its initial stage itself.

Some Disadvantages of Open Source ERP Customization Software

Like every technologies, ERP software also has its share of some disadvantages as given below:

â€¢ Open source ERP is sometimes slower than other ERPs that are used for commercial purpose. It takes much longer time to develop new features to the business solution.

â€¢ The upgradation process of an open source ERP customization becomes quite complicated and complex sometimes.
