Operating system maintenance and recovery by Max Webstar

Article published on February 17th 2012 | Software

An operating system is an important entity of the computer system and is the essential for managing all the tasks on the computer system. It is system software that provides an interaction between the user and hardware of the computer. An operating system is performing the third man role in between the computer system and user. It provides users each and everything graphically that is a virtual representation of the system resources so that a nave user can easily manage his tasks frequently. At the other hand, it manages all the computer resources on behalf of the user in managing the tasks instantly and effectively. Although the performance, of the computer system is liable on the hardware capabilities, but still operating system plays an important role in managing the system resources for optimal performance. It makes sure the completion of the tasks effectively.

There are numbers of the operating systems available in the market that is used by the users according to their own preferences. The selection of the operating system goes to the user himself, and he can choose, and the most suitable operating system from the series of system software to operate the computer system effectively in accomplishing the goals. Linux, UNIX, Mac, and Windows are the most famous operating system that may either provide a graphical user interface or command prompt based interface for users to accomplish their tasks. Linux, Mac and Windows versions of the operating system are providing a graphical user interface. A GUI or Graphical User Interface is the most interactive and attractive interface to use for operating system is providing the visuals to access and use the computer resources. The GUI providing operating system is always preferred by the users to use because of the ease of use that it provides to the users is enormous.

Windows operating system is the production of the Microsoft Corporation that is a leading firm in providing a system and application software for the common use. Windows is the most widely used operating system around the world because of the ease of use and interactive graphical user interface. It is powerful system software that provides a number of utilities to accomplish all the necessary takes easily for the user. Although the operating system is much intelligent and secure, but still there are numbers of the problems that are associated with the windows operating system. An operating system is the backbone of the computer system, and there is always a risk of crash and system software failure. System software or operating system failure may lead to permanent inaccessibility of the entire system, and your data are always on the risk of being lost.

Windows crash is a common phenomenon and is always necessary to overcome the problem. A windows recovery CD is a complete solution for all the problems regarding the operating system failure. Windows recovery disk includes a utility bootable program that is helpful in resolving the problem regarding the windows crash and boot failure.
