PC Optimization tools for Windows 8 Release Preview by Neha

Article published on June 21st 2012 | Software

Performance matters for one and all, and at every stage of life. At school, you are supposed to prove your intellect in front of teacher, at office against boss, at businesses against the challenges imposed by competitors. Performance at different levels has individual, local as well as global impact. When linked with economy, ecology, global warming, etc., it can be multidimensional affecting individuals, societies and communities on all fronts. Ignoring the performance of computer, Internet or collectively the Information Technology that has a deep penetration into your lives and businesses in the present age will be an injustice.

Thankfully, Microsoft is striving to stay up to the peopleâ€™s expectation with every Windows version. Exploring the PC optimization tools and features available with the latest buzz, i.e. Windows 8 will be an interesting job, and why to leave that behind. However, the term optimization is a bit ambiguous, as it broadly talks about diagnosing issues that are related to performance, leaving behind another important sense, where it helps you to work in a seamless manner for optimum output. Letâ€™s discover that one by one. Metro style apps bring everything at your fingertips, right from the productivity suite to entertainment packs, and from outlook communication dais to social network to make sure that you never lose the momentum while switching from one task to another. Fleet of new apps pertaining to Sports, Travel, News, etc., with brilliant features let you have a chance to get the glimpse of outside world from your comfort. For faster accessibility, you can even pin an app to the Start screen as a tile from which you could launch the app and see live updated info. Windows 8 has envisioned a new Boot Options Menu for enhanced booting (as Microsoft boasted to offer below 7 seconds boot time) and enable touch interaction. The menu can be used to modify the startup behavior or firmware configuration, or change the boot from option, and to repair the system startup whenever there is a related problem.

Trapped in the performance problems with Windows 8 Release Preview? Here comes the computer maintenance tool form the Microsoft. Evaluate the performance of different processes and applications running on your system through the use of Windows Task Manager by pressing Ctrl+Shift+Esc. The simplified Processes tab then reveals what's currently using your CPU time, RAM, hard drive and network bandwidth. The Performance tab gives you a graphical view of resource use over the last few seconds, while the App History dialog looks back over days or more to reveal which app is the most resource-hungry. Enhance the startup of the machine by disabling programs that you donâ€™t need frequently.

Windows 8 also comes with an effective recovery option to let you bounce from any unpleasant situation. Access the tool anytime with the combination of â€œShift+F8â€• keys, use the preferred System Restore point, tweak Windows Startup settings, and if required use the â€œRefresh your PC" or â€œRese your PCâ€• button as per demand. Remember to have the backup of your files in case of implementing "Reset your PC" option.

Use of third-party software tools is also recommended to fix slow computer problems. They provide an array of options for clearing off junk files, temporary Internet files, obsolete registry entries, viruses, and more. Usually, these products are bundled with startup organizer, a registry cleaner, defragmentation tools, antispyware features, and much more to let you speed up your PC in no time.
