PC Tune-up? Dad knows it Better by Neha

Article published on March 13th 2012 | Software

This article is devoted to all those who are suffering from performance, stability and security related issues with their Windows-based PCs. For a time being you may think that the phrase is somewhat exaggerating, but after going through you will find the solutions being really practical. The content will not dig out or discover something, but will try to make you aware with the power that you are oblivious with.

Microsoft Update Service

Itâ€™s free of cost, and usually the service remains enabled by default. It brings software patches, hotfix and updates that the Microsoft Support Center feels essential to keep the Windows, Microsoft Office or Windows Live Essentials, etc. running smooth and in error-free state. It also suggests additional Microsoft products that are available for free. If you don't have automatic updates turned on, go to the Microsoft Update website, or Microsoft Download Center. To turn on Automatic Updates: Click Start, and then click Control Panel, and click System, and then click the Automatic Updates tab.

PC Performance Monitor

Windows Performance Monitor is a wonderful PC Tune up Utility that keeps a record of the entire system activities including processor and hard disks speed, the amount of memory available to all running processes, the top speed of the processor, or the maximum throughput of the network interfaces. Open Performance Information and Tools from the Control Panel or just start with the search box, type Performance Information and Tools, and then, in the list of results, click Performance Information and Tools. Though it canâ€™t amend things in favor, but will suggest as how to fix the performance related issues using PC optimization tools like Disc Cleanup, Event Viewer, Disk Defragmenter, and System Information and more.

Action Center

It holds a user-friendly interface where you will find all messages and warnings about security that need your attention. The notifications are marked with colored flags depending upon the gravity of the issue. Click on the adjacent fix button to fix any problems instantly and get your system running smooth. The same dais was termed as Windows Security Center in Vista and XP.

ReadyBoost

This gives an edge to your system in terms of performance, and you should really appreciate Microsoft for that. It transfers the hard-disk cache to external USB drive in order to accelerate the read operations for better PC performance. But the device and the running program should match the system compatibility.

Check for viruses and spyware

Computer Tune Up is a function that works along with computer security. Needless to recommend Microsoft for that, with every Windows version you came across better way to command over the Internet vulnerabilities. From Windows Live OneCare, Windows Defender to Microsoft Security Essentials a lot has changed but what stays firm is the passion to knock down threats so as to transcend confidence while browsing and surfing, and keeping the Windows working at its best.

Eventually, users of Microsoft Windows are grateful to embedded PC Tune-up tools, which are actually the gateway of joy and happiness. So, there is nothing to be lost, and everything to be won.
