These are the videos that are always been preferred to watch whenever you are free from the extensive work hour, and you need to be refreshed. You also want to play your favorite on the way to make your travelling hours get passed in a beautiful way. Mostly you prefer to play the videos on the IPHONES in such a situation.

Mostly you prefer to purchase the videos from the ITUNES to play. These are the music tracks you love to play everywhere on your cell phones, on portable devices like IPAD, IPODS and on the computers. Most of the videos that you purchase from the ITUNES are in M4V video format. M4V format is a video container format that is used by the ITUNES and is developed by Apple. This is a very resembling format to the MP4 video format.

Mostly when you purchase videos from the ITUNES that are in M4V video format are protected videos. The protection could be of several types that are implemented to limit the unauthorized distribution and accessibility of the videos. DRM stand for Digital Right management; it is a security system that is used commonly in protecting the digital products like videos. It is responsible of protecting the copy right of the artists and publishers.

The protection system uses license files to operate the distribution and playing of the videos. If you have already purchased a license to play your favorite video in m4v drm format and you want to play the same video on the portable device or want to play the file on the computer using your favorite application. These videos are limited only to your apple device and these cannot be played on the non Apple device that limits restricts you to play the videos on your computer where you are using Windows operating system.

Similarly, your cell phones mostly only play the MP4 video format. There are two possible problems that you are going to play the files on your favorite media player. First and most prominent hurdle are the DRM protection that limits you to transfer and play video on the media player of your choice. The videos also cannot played on the media player application because such video are in such a format that are in an unsupported video formats.

Both problem are critical and need to be resolved before playing the videos on the device like computer and cell phone. Both problems can be resolved via using a DRM removing and video convertor application.
