PSD to HTML Conversion; a process in Htmlangels by Mike Nielson

Article published on January 11th 2012 | Software

The web site creator is usually someone whose major is in the science of computers; either as a computer programmer or even as a computer engineer, although other people with different education background can also be a web site creator. The important thing is that he enjoys computer work and is very knowledgeable about it.

When approached by a client who is in need of a web site either for personal or business use, the customer already have a general image of how his web site would have to appear. The client sits down with the web site designer and together they plot out the web design; the information architecture, the lay out of the pages, concept and branding. The agreed design is then formatted to create images in Adobe Photoshop. This is called in computer lingo as the PSD. To enable the computer to present it in generally acceptable form as the web page, a process is needed and that is PSD is converted to HTML.

The HTML are in-built tags which serve as building blocks of the web site. While the CSS, cascading style sheet, is the complete set up for the presentation of the web page. It is more commonly used as the separator of the content of the document from design elements. To describe it in simpler terms is like the HTML are the words of the web page and the CSS are the pictures or background of the web site. To put it into words, HTML is the structure and CSS is the individual design of a particular web site.

The process depicted above is called in the computer world as PSD to HTML conversion. It is such a meticulous and laborious process that it will take days even weeks to construct a website. A professional programmer using high tech programming tools are just a few of the requisites needed by a website creator. You must also add creativity and experience to that criterion.

Htmlangels.com is one of the more reputable companies specializing in PSD to HTML conversion process. It is a well known and well regarded entity in the design into web industry. Their PSD to HTML conversion capability have been proven as the one of the fastest and most reliable web design technique around the world. They also exercise the kind of professionalism in management that ensures that customer satisfaction takes precedence above all considerations.
