Reset your Windows 7 password with a password reset disk by Ander Winger

Article published on May 17th 2012 | Software

Have you ever forgotten your Windows 7 Admin password? And it costs your much money and time to reset your Windows 7 password? Whatever our Windows 7 password is remembered in mind or has been changed with othersâ€™ help for bad memory. It's necessary for us to create a password reset disk in case of your Windows 7 password forgotten/lost. Because once we have a password reset disk for our computer, we'll never worry about password forgotten or lost. It's easy to create and use.

HOW to Create a Password Reset Disk on Windows 7?

1.Select"useraccounts and family safety" on control panel and then click "user accounts"

2.Insert a floppy disk into disk driver or connect a USB flash driver to computer.

3.click"create a password disk" on the left pane.

4.The "Forgotten Password Wizard" comes on, Follow the Wizard to create a password reset disk.

How change your Windows 7 password with a password reset disk?

Method1:

1.Insert a password reset disk into computer.

2.Set your computer boot from CDRAM device on Bios.

3.Change password following the Reset Password Wizard.

Method2:

1.Try to logon computer with unavailable password and click "OK" after the "the user name or password is incorrect" box popping up.

2.Insert a password reset disk into computer.

3.Click "reset password" on the Windows account logon interface.

4.reset password as the prompts of Reset Password Wizard.

Note: The premise of creating a password reset disk is the current Windows password remembered. If the current Windows password forgotten, Windows password recovery tool is a better way to bypass Windows logon password. How to bypass Windows 7 password with Windows password rescuer?
