Article published on June 15th 2012 | Software

Parking enforcement can be hard to control without the use of dedicated systems and procedures that have been put in place specifically for this purpose. Many different places require parking enforcement solutions. This could be for public roads, public parking spaces, private land or commercial parking spaces. Many parking enforcement systems use video analytics to monitor and watch for parking and motoring offences. A video analytics parking enforcement system and monitor both off-street and on-street parking spaces, it can monitor the activity in bus and cycle lanes and look for traffic offences such as people going the wrong way down one way streets, using no right or left turns or performing illegal U-turns or people stopping in yellow box junctions and causing a hazard.

These technologically advanced parking enforcement systems donâ€™t require a human operator and can be set up with a range of various functions to capture both pre and post offence shots with a clear image of the vehicles number plate to make it easy to trace the offender. Modern parking enforcement systems rely heavily on the number plate recognition function as this is the most effective way to trace any offenders who have been caught committing an offence on CCTV footage. The latest number plate recognition systems will run on windows XP, Vista, CE or Linux computers making them accessible by all and easy to integrate with other parking enforcement systems.

Some parking enforcement systems will automate the legal process for the collection of penalty charges from vehicle owners. This kind of parking enforcement systems is ideal for private land owners, local authorities, retail and business parks who want an easy and convenient way of managing their parking spaces. Typically a parking enforcement and number plate recognition system will be able to handle PCN processing, PCN enforcement, parking infringement reports, parking code of practice and parking market intelligence solutions
