Article published on January 16th 2012 | Software

With a survey shouting out that 8.3% of the population alone in the US alone having diabetes, the diseases relating to the autoimmunity is also on the rise. Managing the Endocrine malfunctions is a significant step to live a normal life for the infected person.

For autoimmune diseases, though the cure is a probability factor the controlled effect on the life of the infected individual is possible with the advancements in the technology in the healthcare domain. With the interference of the Smartphone technology in our lives is a boon for the people with chronic diseases as diabetes or endocrine disorders. The Endocrine news application under study has all the features that it takes to be a right alternative to a real time human diabetic and endocrine disorder specialist. The application proves to serve the patients and healthcare specialists effectively with a significantly reduced cost. An Endocrine Online News Service Provider developed this application in order to sort endocrine related updates and news collected from around the world. The updates in all formats are collected from the host website. The news collected is sorted by most recent or by most popular that can be set by the user. Sharing the content with friends or concerned people is also an option with this application. A daily dose of breaking news articles, blog posts, video podcasts from the website podium.

Social media networks being a part of the human life the developers have incorporated a feature of sharing articles on endocrine disorder over the leading and upcoming social networks like Facebook, Twitter and others. With an absence of a internet connection while on the move, the application is flexible enough to accommodate saved information and access the same in case of connectivity related issues. In such cases, the users can save the information for later use.

The related videos can be viewed in no time by streaming the video signals directly from the News Network thereby giving the output to the users without any wait time. With the Endocrine News application on your favorite iphone, the users can be online to access to the latest from The Cardiology News with nearly all the content including breaking news, in the journals, Trial Scorecards, from the podium, multimedia and more. Mhealth applications like the Endocrine Today news app serves the people in a better way by reducing the healthcare cost and keeping track of the developments regarding the treatments of the endocrine disorders. When you download the application for free from the app store, you are prompted for a registration procedure to access information for the Endocrine today website. It is a one step registration process and the same credentials are valid for the website also. After the registration, the users can access the most recent and fresh content can be procured along with cover stories and the most popular columns regarding the endocrine disorders by eminent health care specialists of Endocrinology. The search results appear with typing a related keyword in the search bar of the application with no tedious efforts from the user. The information access is seamless with this application and is a perfect tool to track the Endocrinology information in no time.
