Article published on December 24th 2011 | Software

WordPress, the most popular web publishing platform is open source. It is built using PHP scripting language and the database used is MySQL. Open source provides an unparalleled flexibility and scalability for developers to take advantage of. Creative customizations, innovative features and new themes and templates â€“ imagination knows no bounds for a creative developer. And WordPress provides the most apt platform for creative customizations. Whether using WordPress for a blog, or a website or a content management system, you have excellent built in features to work with and build upon.

Thereâ€™s a reason why WordPress is so popular amongst developers. It comes with so many built in features and so much potential for customizations, that WordPress Developers love to take a part of the code or a feature and build on it to make the final product easy to use and user friendly for the end user too. WordPress has a whole set of features to support programmers. WordPress is compliant with W3C standards. This is important for interoperability with todayâ€™s browsers. You can easily make changes to your templates and it will reflect immediately and there is no need to regenerate any static pages. Non-blog content can also be added easily to your website. It comes preloaded with many themes you can choose from. As for features in blogging are concerned, you have the facility to add comments, spam protection, blogs have intelligent text formatting.

Well, features are plenty, and a creative WordPress development team can put together ideas and customize features to ensure that your website has a unique look and excellent features for easy use for customers. Being open source it has the advantage of being flexible and scalable in the sense, you can make changes at any later date without having to change the entire script/code. Features can be added and removed. WordPress development is indeed a challenging and interesting task.
