SkyCaddie â€“ Your Trusted Partner by Johnson Jonni

Article published on February 7th 2012 | Sports

There is much more than pleasure, relaxation and pure ambition to the world of golf. It is a game of precision and accuracy, where skill meets the ability to gauge the situation and respond with the right strokes to get past the best in the sport. The SkyCaddie, hence, plays an important role in terms of accuracy and success in the game of golf, as it plays the key role of accentuating the playersâ€™ abilities to succeed. The SkyCaddie is a Golf GPS rangefinder that goes a long way in the playerâ€™s determining the distance to various spots in the gold course, be it the green or the other hazards that need to be avoided. And if you are intent on making the most of your game, you need to be sure of your SkyCaddie and know what to expect out of the smart gadget.

The SkyCaddie rangefinder is available in different options with various features as may be required on the golf course, including the SkyCaddie SGX, SG2.5 and SG5. The gadget comes with a box complete with rechargeable battery, the LCD protector, A/c power adaptor, USB cable and the belt clip cradle. And yes, you would also have the quick start guide for you to get ahead with your game plan without wasting a moment. The 3-inch display in high resolution is easy on the eye, even as the TFT-LCD screen makes the images look good enough in broad daylight. While the dual navigation is capable of providing precise positioning and improved accuracy, without your having to mess around with the display, the high end GPS uses ultra fast satellite signals to mark positions with utmost reliability.

The SkyCaddie has become immensely popular these days and it is not just the professional golfers who go for it â€“ the game is never complete without your being equipped with a SkyCaddie. While the popularity of the gadget has made the prices drop to new low levels like never before, one needs to be sure that the gadget being bought is indeed an original one and is not one that has been procured through the grey markers using stealth channels. One reason why you need to be sure of the source is that you would have access to complete technical support only to SkyCaddie bought from the genuine sellers who are authorised by the company to resell. When it is an investment in your passion, it pays to double check before you venture out in the field.
