Turf management describes the work needed to keep a sporting pitch ready for use. The skills required for this profession vary considerably dependent upon the sport and whether or not artificial surfaces are used. Special sets of skills are needed to care for athletic fields or native soil fields.

Turf Management NY has made an indelible mark in the field of sports all over the country by organizing many sports events at the school, state, national & international level.

Developing firm, dry and healthy surfaces on greens, tees and fairways is the primary goal of any turf management NY programme. Since every golf course is different, turf management cannot be a prescriptive discipline. There are several key principles which will provide healthy growing conditions, excellent playing quality and greater ability to manage cost. Some of the main activities involved in turf management NY are:

- Managing water effectively to promote healthy turf.
- Rapid movement of water from surfaces, through various forms of drainage and aeration
- Keeping organic matter production down to a minimum.
- Ensuring that all closely mown turf, particularly greens and tees, has good access to plenty of sunlight and air movement
- Maintaining turf species that are best suited to your particular climate, soil type and water availability.
- Implementing the right mowing height and other maintenance practices to favour your grasses of choice
- Growing the least amount of grass to produce a playing surface.

Turf management NJ is experienced by lawn specialists who can help you obtain thick grass with vivid color that makes a significant impact on the overall appearance of your property. A professional turf management NJ program cultivates a healthy growing environment by using a meticulously formulated balance of slow release lawn fertilizers, nutrients and minerals that is based on the specific conditions and individual characteristics of the lawn. A comprehensive approach to turf management in NJ and careful timing of lawn applications creates turf that is more resistant to insects, weeds and diseases.
