They say a great tennis player can play on different if not all tennis surfaces. One of the world's™ greatest, Roger Federer, has conquered as many tennis playing surfaces as he possibly can to win the 4 Grand Slams. In order for a tennis player to become a well rounded athlete, he or she should be able to play fairly well on different courts. Although it is not entirely an absolute requirement for a tennis player to be good on all courts, still, there is a huge bearing on their performance, popularity and quality of a player if they can play well on different tennis surfaces.

Types of Tennis Courts

There are four primary types of tennis courts (according to the material used for the surface): carpet courts, clay courts, grass courts and hard courts. Each type of playing court features specific characteristics affecting how athletes play on the court. Depending on the court surface, some athletes need to change their playing style to get their desired results. Take note of the following characteristics of tennis courts Sydney:

Clay courts – this type of court is made from brick, stone and crushed shale. Compared to the rest of the Grand Slam tournaments, the French Open requires players to play on clay courts. A distinct feature of this type of court is that it can significantly slow down the ball while producing a high bounce rate as compared to grass courts.

Grass courts – grass courts produce some of the fastest rates in terms of ball passing compared to other types of courts. The grass used features hard-packed soil allowing for variety of ball bounces.

Hard courts – this produces faster rates than clay courts but not as fast or compared to grass courts.

Carpet courts – this refers to a carpeted or removable synthetic playing surface.

Depending on the tournament, the best tennis courts in Sydney vary.

Constructing Tennis Courts

Some sports venues host many different tournaments calling for tennis courts construction and resurfacing. Find reliable and experienced tennis courts construction and resurfacing providers to handle the job so you won't have to worry about quality.
