Roger Hamilton and the Struggle to Touch That Sublime Chord by Corwin Smith

Article published on March 6th 2012 | Success

The eighteenth and the nineteenth centuries were called the centuries of the physics and the fields and domains related to it. The brilliant and revolutionary theories being given by physicists like Max Planck that changed the entire perception of the human kind for the things that they were seeing around them were just the beginning. These theories were further developed by men like Albert Einstein, Niels Bhor, and that genius of the scientist named Erwin SchrÃ¶dinger who gave one of the most enlightening of equations that can be called he culmination of the quantum physics and the theory of relativity that put to rest all the queries that man had regarding the nature and the questions like What?, Why?, and How? Those were intriguing the men of thought since many centuries. But the main quest of men since the period of renaissance and even before that was to reach God through logic and reasoning. And hence almost all the physicists who achieved one targets after another in their quest pompously declared that in no time Physics would reach God. But then destiny took its own course and one obstacle after another in their quest to find God through reasoning and Logic began to surface. But then that was the story of the last century. The meandering of the last century into the new century saw different problems emerging. And one of those problems was the financial crevices that the world of finance kept on finding itself in time and time again, and which was having a deep negative impact on the common man as well the countries that they belonged to. And once again the product of nature named Roger James Hamilton stood up to the challenge and used the knowledge that he was blessed with while he was on his way to discover or rather break the shackles of the flawed system of economics that till now had been governing the world of finance to set things right. And Roger James Hamilton achieved that too in just no time.

His theories like wealth dynamics and wealth spectrum touched the same chord that the physicists at the dawn of the twentieth century were trying to touch or rather nearly touched. And Roger Hamilton used that sublime touch in turning around the lives of men and women around the world. And the test of wdprofiletest that Roger devised is the only test that can help the individual in touching the same chord. And once that chord which if given the right introduction goes by the name of â€˜Natureâ€™ is recognized by the man seeking wealth and if he allows himself to imbue in that chord, the real human being within him would emerge and the paths of wealth and glory that he seeks would soon be laid bare in front of him.
