All You Need to Know About Mobile Penetration

by Shaly Criston

Article published on March 5th 2012 | Technology

In order to protect a device from outside penetration, one must know how to hack into them first. Are you someone who is interested in hacking? Do you have the knowledge and prior experience in the field? If the answer is yes then, there are several courses available that provide an insight into the field of mobile hacking. Advanced courses such as these require the student to have some prior networking or hacking experience. The course is very hands on and the teaching techniques are light and relevant. Students will face about 20 percent classroom work and 80 percent lab work. You will actually be allowed to hack into mobile phones (platforms such as iphone and Android).

Obtaining Information From Mobiles

These days most of us store several vital prices of information on our mobile phones. We may not realize that our phones can be hacked just as easily as out computers. Passwords, ATM pin numbers and other such confidential information may be at risk. There are several hackers who are experienced in getting into your mobile phone. These advanced mobile security training courses teach you exactly how to prevent this. Once you attend he course, you will not just be able to prevent attacks, you will also have the knowledge of launching one.

Jail breaking

Another very common problem that many people face is locked phones. Iphones that are bought abroad are often locked and we have to jailbreak them in order to use them. Firms that provide this service are quite expensive as well. The advanced hacking course arms you with the knowledge and you will be able to jailbreak your phone at home easily. You can even start your own jail breaking service for friends and family with this knowledge.

Mobile Apps

Once you attend the course, you will be able to pen-test several apps across the different platforms. There are a whole range of apps these days and you will become an expert at testing them and figuring out the bugs.

Special Ops-Military Personal

Advanced mobile hacking courses are highly useful for people who are in the security business. Also military personal and homeland security persona such FBI, DoD, CIA and NSA can take this course. The threat of terrorism looms large these days and most communication is done through mobile phones. Even people in the covert ops industry might consider taking such courses to enhance their chance of survival in the field. Penetrating enemy defenses might be much easier with such advanced knowledge. Security personnel might be able to detect and prevent such threats if they have sufficient knowledge about mobile security. Mobile security is as important as internet security, especially since mobile phones are becoming a lot like mini computers these days. Advanced operating systems are now transforming our mobile phones into transportable computers.

Some of these course providers are now doing onsite training as well. This might be suitable for large organizations.
