Be careful while buying Projector screen material by James

Article published on February 17th 2012 | Technology

Specific projection screen are designed to improve video superiority for home theatre, training room, boardroom, or auditorium etc and various Projection screens are being offered. Fixed, electric, wall-mounted, portable and tripod are different models that are prepared for front projection or rear projection applications. According to your requirement, you can choose standard size or order a custom projector screen. You can make your screen by various methods First manufacture a wooden frame then attaches the fabric to the edges, is the usual technique which you can follow at home for constructing a projector. This alternative offer power and pressure to the projector screen material ensuing in the finest image, as

â€¢ build wooden frame from 2" x 1" wood similar to canvas

â€¢ attach the material to all boundaries of the frame

â€¢ connect hooks to peak beam

â€¢ patch up hooks to wall and your done

Some tools which we are required are; Staple Gun, Hammer, Utility knifes, Saw and Drill with Phillips screwdriver bit.

Stretchable and none-stretchable are the groups of fabrics used as Projector screen material if we keep â€œmechanicalâ€• characteristics of fabrics in mind.

.

Curtain backing or black-out cloth material rolls are mostly available in all fabric stores. For blocking light, it is useful as it is light, opaque white material which is used to make curtains. Projector screen material is prepared from cotton and polyester, one side appear like woven cotton while the other seem like its plastic coated. You should buy fabric at least 4-inches wider and longer than your planned screen dimensions to allow room for construction whenever you go for buying the material. Use the best projector screen material which is offered in different shapes and sizes; if you want to construct a fine projector screen.
