Breaking myths about solar panels by [Bitoo Electrical](#)

Article published on April 14th 2012 | [Technology](#)

Myth 1: It's expensive

In fact it is lot cheaper than conventional electricity. The solar panel price tag might be a turn you off but once you get the solar panels installed you get the freedom from big electricity bills and of course, you make your contribution in encouraging clean energy. There are many online stores offering great deals on solar panels. Solar panels Australia are of high quality and are reasonably priced. After all it's just a one time investment that will save you a lot on keeping your home warm and cozy.

Myth 2: It is not as efficient

Efficiency of your solar array is decided upon energy needed by your household against the output of the panel. Work out your energy needs first. Research what size and wattage solar array will best match your requirements. The solar cells used in the panel come in three varieties and at different budget points. It's strongly recommended to choose folding solar panels which can be effortlessly moved in the any direction for maximum sun exposure and maximize the efficiency of your solar panel installment.

Myth 3: Upkeep is a hassle

Solar panels are often installed on roof tops. It seems like a hassle to go to the roof to clear off dust, debris and fallen leaves. Well, this is just one side of the story. There are some practices that one can follow to get the most from their solar pane installment without breaking a sweat. Take help from customer support to know how the right angle of the panel, right height and so on. Consider purchasing solar panels Australia as their client servicing is prompt and reliable. They will tell you the best ways of maintaining solar panels to improve its output and how you can add more productive life to your solar panel with easy maintenance tips.

Myth 4: Can't use on cloudy days

In truth, the efficiency level marginally drops during no sunlight, which includes night time as well. Let's take a quick look at how solar energy works. Solar array collects scattered sunlight and is taken to an inverter which converts sun's energy into usable electricity. This electricity is stored in deep-cycling batteries which can be used during night time and even on cloudy days. Depending upon the seasons, however, you might need to tilt the panel for maximum exposure to sunlight. This is where folding solar panels come handy.
