Buy Camera Tripod â€“ Few Essential Tips and Advantages

by Josh Wilson

Article published on January 12th 2012 | Technology

People with a passion for photography are very particular about the kind of camera they are selecting to buy, the camera lenses and some other accessories such as the memory cards, batteries etc. However, one of the important camera accessories that the photographers simply cannot afford to miss is the camera tripod. Although the tripods are not very convenient to carry, yet these are awesome accessories for taking steady photographs, along with the macro-photography, nature shots and in dim light situations. If you have been seeking to buy camera tripod there are multiple things to consider. Some of the vital aspects are enumerated in the following paragraphs.

As you seek to buy camera tripod, the first and the foremost thing you need to consider is the tripodâ€™s stability. Make sure that you test the stability of the tripod before you purchase it. Extend the tripod to the full and apply bit of pressure from top and if you find the tripod wobbling after you exerting pressure then you need not consider it as your choicest article. Buy camera tripod which is made out of robust material and hence is of premium quality. This decreases the possibility of any accidents while shooting! Furthermore, you need to make sure that the tripod can withstand your cameraâ€™s weight. If you own a SLR camera that is pretty large, some general tripods may not be able to carry its load and hence it is recommended that you buy camera tripod manufactured from a sturdy material.

The next thing you need to consider while buying a tripod for your digital camera is its height, weight and size. These three factors vary from one tripod to another and you need to buy one as per your own needs. For instance, if you are to travel too much, you certainly need to carry the around your shoulders and hence buy camera tripod that is light in weight and a bit convenient to carry. A tripod should suit your height and to ease your shooting experience, it is smart to purchase the tripod that matches to the height of your eye level.

After you have checked the stability of the tripod and got the size of the tripod right, you need select the head type. Generally, there are two type of tripod heads and they are -

1. Ball and socket heads

2. Pan and tilt heads

If you are to shoot video, then a tripod with a pan and tilt head is your choicest option. The pan or tilt heads allow you to move the camera upwards and downwards as well as sidewise, without shifting the actual position of the camera. For still photographs, the axis controls are not required and the ball or socket heads make a better option herein. With the ball and socket head tripod, you can make the camera loose enough to rotate it in your favored direction.

Tripods have many advantages. It reduces the camera shakes and enables to capture difficult shots with ease. You can buy camera tripod from a professional store which sells various photography articles such as extra camera lenses, camera bags, batteries etc. Nowadays, the camera tripods are also available in the online stores. You can not only buy camera online but can also buy its accessories at economic price, sitting at the comfort of your home. However, while you buy camera online you cannot test the quality of the product as you can if you buy the gadget from a brick and mortar shop. So, before you plunge in to buy camera online or any other camera accessories, it is necessary that you validate the reputation of the company and its track record, in order to get the best deal.
