Criteria Required for What makes a Successful Operation Support Systems Engineer by Chris Adam

Article published on March 28th 2012 | Technology

The Operations Support Systems Development Engineer joining any company to develop the broadband service has a number of vital works to perform. He will be in charge for the planning, development and implementation of the operations support systems for the works he will do for that company.

If we go into a detailed discussion of the responsibilities that an Operations Support Systems Development Engineer has to perform, there are many of them. The first and foremost thing he needs to do is to design, implement, test and support the operation support systemsoperations support systems. Give proper inputs in the development of the outline and planning of the OSS network and supply technical details to the development team. Work as a team in the review of the system and provide necessary ideas about the rectification of the defects and fulfillment of the entire project. He will be the person to choose the software and hardware required for the operations support systems and also modifies them to meet the requirements of the company. He has various other trivial things to follow such as looking after the technical performance of the system, prepare a timeline for all the works to be finished within, estimation of the budget of the product, develop PPT to give a clear idea to all about the project etc.

An engineer who has to perform such responsibilities must also possess some technical qualifications and qualities of his own. He should have a minimum degree ofbe a B.Tech in the field of Electrical Engineering, Computer Science or related technical field. He should have a profound knowledge and idea about the development of operation support systemsoperations support systems architectures. He should know the proper steps for IP management. He should be able to work freely in a team as such difficult work requires a set of different individuals forming various groups. Lastly, deep knowledge in performance management, service activation, billing, service activation is an added advantage.
