Digital Signature provides amazing features to users by [Mark Taylor](#)

Article published on November 29th 2011 | [Technology](#)

For secure business transactions everyone is using Digital Signature applications, as it is easy to handle and provides lots of features to the users. Digital Signature is a type of application which is used just as your hand written signature and it provides authenticity to the documents after application. If you put Digital Signature on a document then it becomes trusted and no one can change the content of that document. Digital signatures are getting a real exposure in corporate world as they have to sign different digital contracts each day and there is no other technique which can be used to sign a document. Digital signature is used by a person to sign any authentic document and it is providing a medium to interact with people digitally.

In ancient time we use to put a seal on paper documents which signifies that the signer has read all the points mentioned on that document and he is agree with it, but time has changed now we have to sign documents digitally because computer has become an integral part of our lives. We use internet for any business deal and there comes the problem of agreement, how can we sign a document digitally without having an application which will put an electronic seal. Here comes digital signatures in frame and they are like an electronic seal which is putted on documents to give them authenticity.

Modern Electronic Seal is gaining popularity because it helps in different aspects of transactions made by users. There are so many options we have which can be utilized while using internet as a medium for business deals. We use internet for shopping these days and for payments we have to relay on different options such as paypal or credit cards. these are the options we have which can be used accurately. But technology also shows some grey shades which can be harmful in terms of security. If we share personal details with a stranger then it can be used against us. That's why we need a medium which should provide a secure medium to interact with people.

There are so many programs which are used by people now days to make a business deal with the clients. Digital signature is not a program; it is an application which is useful while signing a document digitally. To reduce risks of forgery and false claims use digital signatures, they will be easy to handle and will provide a secure medium. You can buy digital signatures from certified authorities in cheap rates and it is a confidential process which will give you an application which can be used for a limited period of time.
