GPS Tracking: for everything of value! by [Meitrack](#)

Article published on May 9th 2012 | [Technology](#)

Remember when there was no GPS tracking? No? Well, you are not alone. When such technology becomes integrated into daily life, people forget how they used to function before it came around, thus proving that technology has changed lives for the better. Few technologies have been used so widely around the world as the GPS tracking system. It simplified life and ultimately supplied what was in demand at that particular point of time.

GPS tracking first came about in the 70s for use by the US military forces. The armed forces in all parts of the world have benefited from the usage of GPS tracking. Understanding the terrain and the enemy movement strategies is a big part of combat and GPS tracking is helping them doing just this. Major breakthroughs have been made in combat strategy and it has effectively changed the rules of combat. This is glaringly obvious with respect to the forces stationed near or on the front line where tracking movement becomes not only vital but a day to day necessity. GPS tracking is literally saving lives there.

In today's busy life, keeping track of your vehicle or even your kids and pets can be a time-consuming job. Here GPS comes in handy, tracking the movements in real time. One of the biggest uses of GPS is keeping an eye on kids who have the tendency to explore. With personal trackers like Meitrack's MT90, you can create a "geo fence" around these kids and you will be alerted if the device is taken past those set boundaries. Young children can be monitored this way and can be kept in check so that they do not wander out too far. Also these devices allow for listening in, two way communication, and an SOS button the child can push in the case of an emergency. It is safe and smart to use a personal tracking device for your children, pets and elderly loved ones.

Installing a GPS tracking system to your vehicle "be it a car or a caravan" can help gauge its position in case it is stolen. Even if this seems to be a rare occurrence, insurance companies tend to lower your insurance premium on cars that have GPS devices, like Meitrack's MT90 installed in them. It is better to be safe and ready rather than being sorry at a later date. GPS tracking technology has become fully integrated into the way of life in all parts of the world. More and more users are discovering the potential of this tracking system and using it as a part of their daily routine. With such broad uses and savvy features, along with durability and water resistant, GPS tracking devices are more important than ever to consumers.

The point of technology is to make life simpler and life's tasks easier. GPS tracking system does just that.
