How Video Conferencing has advanced significantly in the Modern Day Life!! by Stuart Owens

Article published on February 20th 2012 | Technology

Video conference is a way to conduct conferences between two or more people at different sites using computer networks to transmit audio and video data. These were initially used in private offices and had point to point contacts. Later, Video conference developed to be used in multiple locations as well. If we look at its functioning it mostly works like a video telephone. Most people do video conferencing using computer systems. There is a video camera attached to the computer along with a microphone and speakers. The participants can speak to each other, while their voices are carried over through the network. These voice signals are transmitted to other speakers as well. Through the camera the images are also carried over and would appear in the window of the other participants monitor as well. This explanation could be only for point to point. On the other hand the multi-video conferencing allows three or more participants sit in a virtual conference room. People can see other and talk the same way as if you are sitting in one room next to each other and speaking.

The video conferencing facilities started to become popular only after the 1990â€™s. Until then people used only STD and ISD services and could speak over the mobile phones and telephones. The Video conferencing made it much easier for people to communicate. People who were more concerned over their loved one became even more secured as they could see each other and felt as if they stayed in one house. Due to this, even though miles apart, they there were relaxed. However, at the early stages video conferencing was very expensive and a common man could not avail its services. People used Video conferencing mainly for business purposes and only those who had money were able to afford to do video conferencing. However, Video conferencing has changed over a few years in the recent past. The rates are also come down with the dawn of internet services. People have started to have video conferencing at home as well. With the help of decreased rates it has become convenient to communicate with each other for hours together and the bill also comes up less at the end of the month. In Addition, even the rates of the equipments has come down significantly and has become dearer to the customers at large.

Today, people can have video conferencing not only using their computer systems, these facilities have been brought down to our televisions and even mobile phones. Today, there are wide varieties of smart phones available. People can communicate with more number of friends using these video conferencing facilities and also use internet services. Today, we have high definitions set to our televisions and these can be connected to our laptops or computer pcs to these TVâ€™s and can video conference. With the help of these HD TVâ€™s you have a wider picture and sound clarity. What more is required when you can have these two features? However, as per your required there are also additional features available to interest more customers and procuring its services. When I say services there are numerous service provider just like the Xfinity Deals provides these services at very affordable rates.

Today, families through the world procure these video conferencing facilities. For instance, the whole family can sit together in front of their monitors in their own rooms. There are multiple connections available just with one service provider. People can all come together, while there are different chat rooms available and you have a preference to create your own profile as well. You can have multiple conferencing at the same time. To conclude, this has become a basic necessity for all households in the modern.
