Invasion of Android on PC world by James Gini

Article published on January 13th 2012 | Technology

The Android is one of the latest developments in the ever-changing technology arena created by none other than â€˜Googleâ€™. Companies have decided to introduce the Android on PC experience for desktop users.

There are softwareâ€™s which enables an app menu on your desktop as the YouWave. It comes with a free 1-week trial so that you can have a feel of Android apps. It comes with an emulated environment along with a home screen and app menu. You can directly access the online available app stores such as Amazonâ€™s App Store and AndAppStore. You can directly install the apps by clicking their icons and they will automatically appear on the app menu form where you can launch them.

The Android emulator that has been provided in the Android software development kit by Google is also a great way to experience Android. Although developers are the prime target of this emulator one can easily try out the latest version of Android. Beginners will just have to download the SDK manager by Google and install it. Launch the software and search for the latest Android Version. One has to click the install button and the rest is done by the SDK manager from downloading to installation of the software. While the Android emulator definitely does not perform as well as the BlueStack or the YouWave primarily due to non-integration of any app store but one can download apps inside it and install them.

While the emulator introduces Android on Mac as well, there is not much scope of Android on Mac. One can easily sync your Android based phones and tablets with a Mac by using SyncMate. All you need to do is download SyncMate and install it both on your Mac and on Android device.

The Android on PC is in it a whole new experience as most users love open source sharing which will boost sales in the Android sector. While Android in Mac is in its nascent stages of development but Android apps on Mac is the next big trend coming up. However, one may need to wait for some time.
