Article published on February 13th 2012 | Technology

In recent times, Android operating system has become one of the most popular operating system and its popularity is increasing continuously. It is Linux-based operating system which is developed for mobile devices including smart phones as well as tablet computers. This operating system is developed by Open Handset Alliance led by Google. Google purchased its initial developer Android Inc. in 2005. Being free and open source, there are myriads of Android applications available for mobile phones or tablet PCs and their numbers are increasing continuously. It has been observed in various surveys that Android applications never crash or hang like other OS applications even iOS applications are more crash.

One of the main benefits of Android applications is that most of them come free; you have not to pay any kinds of cost or charge to buy them. Moreover, they have all the facilities that you get in paid applications. Many people think that there will be security issues in these applications as they are free of cost but the reality is not like that. They are very secured and safe in use like many other OS applications. If you have any confusions or doubts about these applications, you can consult to users who have been using applications for many months successfully.

If you are not able to find users who are using Android apps, donâ€™t be worried. In this World Wide Web edge, there are various blogs and websites available that are fully dedicated to these OS applications. You can read the detailed information of various kinds of applications that can be frequently used in smart phones as well as tablet PCs. You can also get reviews of latest applications or upcoming applications in these websites or blogs. This will help you to remove any doubts or suspicion that you have head earlier about the vulnerability of applications. Download link of applications are also available on this site and you can download them. If you are scarified the performance of the applications, continue to use them otherwise itâ€™s your choice.

You must use Android OS applications by yourself so that you could get the actual performance of the application and evaluate that you have to use them further or not. Competitors of these applications are always trying to expand rumors about their bad performance which are totally false. In fact, they are afraid of popularity of Android OS that it has gained in a short span of time. You always try to avoid these kinds of rumors and try them at your end.
