You can also go for the 36V which is known to provide excellent run time.

One of the advantages of the dewalt 12v battery is the design. The batteries are extremely lightweight and are highly durable as well which promotes longevity and also offers exceptional portability. The productivity of these batteries is also quite impressive given that there is far less downtime and there is no self-discharging that happens at any point of time. The high performance battery pack complements the industrial tools from Dewalt as well. They come with a little charger which can charge the batteries in no time thus saving a lot of time too during critical operations.

One of the most impressive and intuitive features of these batteries is the fact that the entire Dewalt range of batteries from 7.2 V to 18V can be charged using the same charger. This includes the Ni-Cd, the NIMH and the Li-ion batteries. All of these can be charged using the same charger. This means you can carry just the one charger for a wide variety of cordless products making the kit even more portable and easy to handle. The Li-ion battery comes with a 1-hour charger. The Lithium ion cells from Dewalt are known for their long operational life which is good for as many as 2000 charges, so that you can get the full value of your money
