The Nokia c6-01 unlocked has key specifications that can really satisfy the users. Those features include the Symbian 3 operating system, the ARM 11 680 MHz processor, a 340 MB internal memory with the expandable microSD for up to 32 GB, a 3.2 inches AMOLED capacitive touch screen with a 640 x 320 pixels, a connectivity of Bluetooth 2.1, Wi-Fi, HSDPA which has a speed of 3.6 Mbps, GPS receiver with A-GPS support, a dual cameras with an 8 megapixel on the back with a dual LED light and a secondary camera at the front, a TV-out functionality, digital compass, a stereo FM Radio with RDS, microUSB port with USB on the go support, a standard 3.5mm audio jack, as well as the flash and java support for the browser.

The Nokia c6-01 unlocked is a least-expensive smart phone that brings together the touchy-feely skills together with a silky physical QERTY keyboard layout. The C series of the Nokia industry has boomed already in the market, thanks to the intelligent idea of the Finnish mobile phone maker. The c6-01 is now looking to follow the footsteps of the stylish Nokia C3 and Nokia C5 which already set a standard for the basic functionality packed with a high quality when it comes to its design. It has a 3.2 AMOLED capacitive touch screen with a slide out QWERTY keyboard.

The Nokia c6-01 unlocked is produced just as the same as the N97 and the N97 mini. Yes, it is true. This handset has a lot of similarities between the N97. One example of it is their Symbian 3 operating system. In addition to that, it has the same UI with live Facebook emails and feeds along with the direct access to Ovi and GPS. Its touch screen is as well the same capacitive effort as the earlier flagship of the Nokia. On the other hand, its only main difference is the fact that the keyboard is not capable of flipping out.

Despite the fact that the Symbian 3 operating system of the Nokia c6-01 unlocked is filling behind the Apple IOS 4 and to the Android customization and applications, it is still remains as the handset that is easy to use. This is because of the reason that the setting up of the email on top of the home screen is as easy as trapping in your email address as well as password. In addition to that, it is also the same for straight Facebook access. However, the front screen of the c6-01 is too messed up, particularly when it is viewed in a landscape format. It is very difficult to hold your focus anymore since there is too much going on. On the other hand, although in the portrait mode you are to rely in the touch screen, it is indeed easier on the eye at this format.

When it comes to the QWERTY keyboard of the Nokia c6-01 unlocked, it is indeed more decent which took only a few minutes for the user to type faster.
