Article published on March 8th 2012 | Technology

What makes a smartphone special? Everyoneâ€™s answer will be apps, apps and apps. Hundreds of apps are emerging on regular basis to satisfy the growing demand for modern apps. Among the different types of app stores, Android and Apple are more popular among the smartphone users. Most of the iPhone users have started to look for iPhone apps even before the launch of iPhone5. Appleâ€™s app store has more number of apps than any other app store, but its large app count has not triggered its growth beyond android.

Android apps are gaining more popularity due to its widget application which adds spice to music and social networking features. Android app market is growing at a rapid rate due to its increasing app count. There are thousands of android apps that are distinct, advanced, trendy and easy to use. As a result, identifying the best apps to spice up your smartphone can be difficult.
