Protect your home and your health with Humidity Control by James Blee

Article published on August 7th 2012 | Technology

Working or living in a humid environment can be extremely uncomfortable. Moisture rich, humid air doesnâ€™t allow sweat to evaporate and is also the perfect environment for pests such as fleas and cockroaches to live and breed in. Without proper humidity control, condensation can build up, causing mould and mildew damage to properties.

Installing correct humidity control is on the only way to ensure a more comfortable working or living environment. Dehumidifiers offer the best source of humidity control. Removing and collecting the excess moisture from the air, this type of humidity control leaves behind air that is dryer and much more pleasant. Having humidity control in place not only makes you feel more comfortable but can also improve your health. The mould and mildew that can grow in humid environments can cause nasty health problems, especially to asthma sufferers. Eradicating the moisture in the air can help to eradicate potential health issues. Humidity control also protects your property from dampness, mould and condensation which can cause a whole host of maintenance problems.

Humidity control is also important in certain industries. The pharmaceutical, mining and food production industries all need strict Humidity Control in place. Commercial properties with delicate items are also at risk from humid air; archives and museums require humidity control to avoid condensation and moisture ridden air from damaging precious documents and artwork.

Dehumidifiers come in a wide variety of applications; from temporary units which provide humidity control during the worst affected months to wall mounted units which offer humidity control all year round. Compact dehumidifiers are ideal for rooms short on space, and can provide mobile humidity control. The type of dehumidifier you choose will depend on your personal requirements; if noise is a priority choose a humidity control unit with guaranteed quiet operation. If youâ€™re looking for humidity control in a large environment make sure you choose a unit with maximum power output.

For your humidity control needs take a look at dampcontrol.co.za. In operation since 1966, they have a wealth of damp control expertise and can ensure you choose the right dehumidifier for you. With humidity control units for rent as well as sale, youâ€™ll have complete control over the unit you choose.
