Article published on April 27th 2012 | Technology

Golden Frogâ€™s VyprVPN is one of the worldâ€™s most preferred means of securing internet browsing. such, it is constantly being updated in order meet the ever changing technological and location demands.

Golden Frogâ€™s VyprVPN is a very popular means of securing web browsing all over the world. It is used by many clients fromm all over the globe who demand maximum security. As such, it is required of Golden Frogâ€™s VyprVPN to be highly efficient. On this note, Golden Frog Inc. has not disappointed. In order to keep up with changing times and technology, Golden Frog constantly updates its VyprVPN in order to enhance its efficiency. This article follows through some of the updates that have been carried out on VyprVPN.

In December 2011, Golden Frog announced the launch of the VyprVPN App for Giganews. This app gives Golden Frogâ€™s customers, access to Giganews. However, for you to be able to use this app effectively, you need to be a member of Giganews. With this VyprVPN app for Giganews, Giganews members are able to configure and manage their VyprVPN connections.

February 2012 saw the upgrading of the VyprVPN App from Beta to version 1.0 with multi-language support. The new version was availed as an update or a download. The updated app supported major languages such as English, German, Spanish, French, Portuguese, Mandarin and Dutch. It also had increased L2TP and PPTP stability and the speed and use interface had been improved to give a better end user experience.

The search for better quality with the VyprVPN app did not end there. The month of March ushered in another upgrade of the app to version 1.1. This version which is the current one has refined several details from the 1.0 version. VPN descriptions have been reduced to just VyprVPN instead of the location name and updates occur without reboots. The month of March has also seen the opening of a new Golden Frog VyprVPN server in Austin, Texas. The new server supports all protocols and is availed automatically in the existing options when you are choosing a server.

As is noted in many comments on the internet, VyprVPN is your ultimate solution to online security breaches. It has been hailed to crack Stalker which is an application known to collect unsecured information from iPhone users and present it in an easy to use interface. With the use of VyprVPN however, all important information gets encrypted and is protected from Stalker.
