Article published on April 6th 2012 | Technology

LCD enclosures works as a protective shield on the LCD screens that will provides a standard to a device and also ensures that they will work efficiently in all type of weather conditions. But a question arises in the mind of many users that why the need of LCD enclosures arises after all there are many TV screen available that work perfectly even without the LCD Enclosure.

Though it is true that all the LCDs are not suitable for the warm environment as we generally sees in our living room area. And now a dayâ€™s such devices are generally used in outdoor areas in order to do advertising at large phase. Many areas having different climatic conditions sometimes not suits the Plasma TVs and LCD screens because it contains destructive elements like temperatures or the risk of theft or vandalism which can directly or indirectly damage the screen. Outdoor digital signage now days have become so popular device that it is used as a popular medium of advertising in order to attract the public passing through that place.

Although all these devices are not designed only for the operations in these areas but now the LCD screen that has been produced are comparatively more expensive than standard devices. LCD enclosure is mainly used because they can easily fulfill all these standards. Thus these devices are now used in inhospitable areas and in outdoor locations.

Weatherproof protective shield on the LCDs in the form of these enclosures has made it possible that now LCDs can be used not only in outdoor places but it is also suitable for the industrial and factory environment. These enclosures are not the water resistance that protects the device from water but also from the freezing conditions of winter and harmful sunlight rays in the summers as it possesses the integrated system which can easily tackle the heavy cooling and the heating problems.

Not only this, These LCDs has an additional feature that it has an anti glare glass which protects the screen from the direct sunlight and also has air curtain which prevents the hotspots of the screen from the direct damage. On the other hand, these LCD enclosures are manufactured in different texture with the help of a solid steel element that makes a secure shield to save it from the touch of vandals and thieves at the same time they are providing the stylish cabinet for the digital signage.
