Rig Cooling Systems are in Great Demand by James Blee

Article published on December 21st 2011 | Technology

Did you know what the reasons that rig cooling systems have gained such a heightened popularity are? Among other reasons, it is the ability to provide adequate protection to the rig against radiant heat that many find very beneficial. This radiant heat is normally generated during early production or well tests.

It is equally interesting to note the manner in which the rig cooling system works. It provides the much needed curtains of water immediately just behind the burnerâ€™s head. In many situations, the water is provided to other locations as warranted by Heat Radiation Prediction Model. This model is credited for generating heat radiation isopleths. Experts of the industry are of the view that these isopleths are especially very beneficial for predicting various effects of heat. This prediction mostly pertains to the heat found on permanent rig equipment.

With help of water curtain, these systems have a wonderful advantage that many find very tempting. They are known to have the ability that facilitates retrofitting to any kind of drilling platform. This becomes very necessary at a time when you wish to provide comprehensive water screen.

With an increased use of water curtain, the number of suppliers too has surged. Therefore, theses suppliers try their best to woo their customers with satisfactory personnel who can provide you with perfect service. In order words, they ensure you get your value for money and your associated costs in the process are minimized. Additionally, they make attractive offers that include different patterns and effects. Because they can be started automatically, it fits into the bill of every client. In order to have the beauteous effect, they are suitably teamed with many forms of DCC lights. It has been found they can easily be installed in various areas that includes, sidewalls, entrance of a building, adjoining pillars, adjoining glass windows, wall waters fall curtain, etc.
