Article published on April 25th 2012 | Technology

Natural gas conversion is all about replacing the petrol or diesel cars with LPG gas cylinders to prevent the depletion of fossil fuel. It is now the predominant method by which majority of the vehicles are operated all over the world. This is because the government in most countries has realized the importance of preserving the fossil fuels like coal and petroleum and as a result are working together to save the natural resources.

The demand for fossil fuels has increased drastically over the years and hence a tremendous amount of deforestation is taking place. On one hand where, mines are dug without any control, on the other hand several major steps are being taken to stop or lessen the use of fossil fuels. Instead vehicles are now run on CNG or Compressed Natural Gas. This not only increases the performance of the vehicle but also proves to be much cheaper. All the cylinders are checked thoroughly by experts before dispatch.

Natural Gas Conversion is taken to a whole new dimension here. The valves are double checked for maximum security and safety. They have various types of CNG cylinders and thus consumer can order according to their needs after going through their online catalogue. Type 1 CNG cylinders are made of chrome molybdenum steel while both Type 1 and Type 2 are suitable for use for as much as twenty years. Although a lot of checking and maintenance is required, a little bit of extra effort can go a long way to help our eco system? You take your car to them and you car is registered as CNG services and the change is made without any major hassles.

By using natural gas conversion kits, it can be ensured that the environment is safe from the harmful effects of car monoxide.
