Several Concerns You Have to Consider Concerning the BlackBerry Enterprise Server Express by [Samantha Cole](#)

Article published on May 16th 2012 | [Technology](#)

To live in this competitive business world, you must be able to go with the features of other companies already aboard. This implies that you must always get access to your projects no matter where you are. Thankfully for you, BlackBerry is here to help you do just that.

The Enterprise Server is a software package provided by BlackBerry that allows for the workers of big companies to get their work-related applications, such as files and emails from their personal BlackBerry phones. This software is associated with other messaging and collaboration software like numerous Microsoft applications or the Lotus Domino Server. This allows employees that are out of the office to manage their emails, edit files, book appointments, and use business applications. Very little businesses can afford this software though, and that's why BlackBerry introduced the Enterprise Server Express for small enterprises.

What does this suggest to small business owners?

The Enterprise Server Express is basically meant to be the original Enterprise server's smaller version. It is built on a similar program, and has a lot of the same features and functions. The principal difference between the two is the price. Moreover, the Express version has less client access licenses, which signifies the number of people who can use the software.

What applications are backed up by the Express version?

It may be far easier to ascertain what applications aren't supported by the Express version compared to those that it does support. A number of premium applications that are available only in the full version, like Enterprise Instant Messaging Clients, BlackBerry Mobile Voice System, and Chalk Push software, aren't supported by the Express edition. Aside from these, you can do almost anything.

What do I acquire?

Once you acquire this software program from a reputable supplier, the typical number of server CALs you obtain would be 75, which means that 75 individuals can utilize the software once it has been installed. You can also choose to add another 75 to this number if you want. All you have to do is give a few dollars along with your original purchase.

How does it benefit IT administrators?

The IT department of your company will also be glad to understand that they can also obtain over 35 IT controls and policies. They can gain access to a server client access license and wipe the phone from another location, or restart the passwords. The original version presents close to 400 IT controls and policies.

You need a reputable server with enough server CAL capacity of your organization, so why don't you utilize this?
