The Emerging Trend of Smoking Electronic Cigarettes by Julia Roger

Article published on July 5th 2012 | Technology

Electronic cigarette is a relatively new invention that every smoker needs to be aware of. This smokeless cigarette, also known as e-cigarette has changed the entire scenario for smokers all around the world. Now you can buy electronic cigarettes and get the same feeling of an actual cigarette, without the health hazards of an actual cigarette.

The functioning of an electronic cigarette is very different from the usual ones. No tobacco is burned, rather after inhaling from an e-cigarette; a â€˜flow censorâ€™ is activated, releasing a vapor containing propylene glycol, nicotine and the scent of tobacco. Thus, an e-cigarette allows you to have your share of nicotine without the cancer causing agents such as tar, hydrocarbons and so on.

These days one can also buy electronic cigarettes online. Some more facts and features of these cigarettes are stated below:

â€¢ Apart from being healthier than the traditional ones, these cigarettes are completely legal. These are not prohibited in bars, work places, restaurants and other public places, unlike the traditional ones. Moreover, it does not cause harm to others; there is no risk of passive smoking involved for others.

â€¢ The refillable cartridges of these cigarettes come in a variety of flavors like menthol, apple, strawberry and regular; and nicotine strengths like strong, medium, and light.

â€¢ The greatest advantage of e-cigarettes is that they cause the same oral fixation and the tactile sensation that is desired by the smokers, and satiate a personâ€™s tobacco cravings as well. Upon inhaling, the lungs are filled with the sensation of warm tobacco; however, as mentioned earlier the vapor is much less harmful, smothering the risk of cancer and does not offend others as well.

This is surely one of the most beneficial discoveries of science and technology and has come to help smokers in a lot of way. Scientists believe that they will surely reduce cancer rates that are usually caused by smoking.
