The Latest in Android Phone Technology: LG Optimus 2X by Barry Knightly

Article published on December 29th 2011 | Technology

Nowadays, the mobile phone market offers you more â€“ if not everything â€“ beyond just conversation.

The saturated market offers devices that over recent years have come to be more than just telephones.

Compared to five years ago, how likely are you to purchase a phone without an integrated digital camera or browser application?

An Android Phone focuses on the power of applications whilst Windows Mobile Phones focus on functioning like a mobile PC.

Here we take a closer look at a selection of Smartphones available through LG.

Optimus 2X

The Optimus 2X is the worldâ€™s first dual-core Smartphone. Powered by Android 2.2 technology â€“ this is the latest addition to LGâ€™s smartphone family.

Fast

The Optimus 2X offers a faster and greatly improved performance, meaning a more comfortable Smartphone user experience compared to that of other mobile devices.

Tegra 2, NVIDIAâ€™s mobile dual-core processor that runs at 1GHz, makes web browsing faster compared to any other Smartphone with a single core processor running on the same clock-speed.

With the Optimus 2X, consumers can also experience seamless multitasking between various applications and instantaneous touch response, making for a much more comfortable user experience.

Shoot

Packed with the latest features, the Optimus 2X includes an 8 MP camera with full HD 1080p video playback and recording.

An LED flash and front facing 1.3-megapixel camera for video calling means youâ€™ll never miss a moment.

Photo and video content can be easily played back using the HDMI interface (cable). Simply connect the Smartphone to a HD TV to view your content in full HD instantaneously.

Fun & Games

Where the Optimus 2X goes beyond its basic needs, is with its high quality gaming experience.

With the use of Tegra 2, gaming performance is faster compared to any other Smartphone. It also allows users a console-like gaming experience with vivid graphics and 9 axis gyro sensor controls.

Using the HDMI interface, you can connect the Optimus 2X to a compatible HD TV for the ultimate gaming experience.
